

Student Performance Prediction System (AI & Data Challenge)

Team Name: **AI Visionaries student**

Problem Statement

- • Analyzing student performance is a difficult and time-consuming process
- • Teachers spend a lot of time in manual ranking of students
- • Data-based decision making is not effectively implemented

Solution

- • AI/ML-based system that analyzes student marks and performance
- • Automatically generates student rankings
- • Identifies weak and strong students based on performance data

How it Works

- • Student data is collected (marks, attendance, etc.)
- • System processes and analyzes the data
- • Algorithm calculates performance scores
- • Final ranking is generated automatically

Output

- • Ranked list of students
- • Performance analysis report
- • Exportable CSV file for records

Benefits

- • Faster evaluation process
- • More accurate ranking system
- • Saves time for teachers and institutions
- • Enables data-driven decision making
